Type: ROUTINE INSPECTION
Date: 13-APR-2016

2.40(b)(2) REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

* One blue colored adult male Shih Tzu (microchip number 17152) has an white colored, opaque area on the center of the surface of the eye (cornea). There are small blood vessels in the center of the opaque area on the cornea and minimal discharge on the surface of the eye. The upper/inner corner of the white of the eye is red. Eye problems can be caused by trauma, infection, and other medical problems and can be painful. The animal listed above must be examined by a licensed veterinarian in order to ensure that an accurate diagnosis is obtained and an appropriate treatment plan is developed and followed. This information, including the diagnosis, treatment and resolution of the condition, must be documented and made available to the inspector upon request.

3.1(a)

HOUSING FACILITIES, GENERAL.

* Two enclosures, each housing a female dog and her litter, had 40 watt light bulbs overhead as a source of heat for the puppies. These light fixtures were low enough for the mother dogs to come into contact with the bulbs and did not have guards over the bulbs. Unguarded light bulbs can cause burns when they come into contact with the dogs. The licensee must that housing facilities protect the animals from injury. Correct by 4/27/16.

3.1(f)

HOUSING FACILITIES, GENERAL.

* A strong odor was detected coming from the settlement pond during the inspection of this facility. The odor was evident throughout the entire facility. The settlement pond is centrally located in the middle of the dogs being housed in outdoor enclosures. In addition, there was a buildup of fecal waste and flies located along the edge of the settlement pond. The licensee stated that the pond was last pumped in December 2015. Fecal waste buildup over time can allow for strong odors to exist and attract pests which can transmit disease. Fecal waste needs to be removed often enough to help reduce potential disease or health risks to the dogs. The licensee must maintain all outdoor settlement ponds in a manner to prevent odors, diseases, pests and vermin infestation. Correct by 4/27/16.

3.9(b)

Prepared By: ROBERT BACON, A C I USDA, APHIS, Animal Care

Date:
13-APR-2016

Title: ANIMAL CARE INSPECTOR 4001

Received by Title: OWNER

Date:
13-APR-2016

Inspection Report

FEEDING.

* A buildup of dried, caked feed and debris was observed in the interior of 15 food receptacles. A lack of cleaning of the receptacles could promote bacteria growth and other disease causing agents which could increase the risk of contamination of the feed. The nutritive value could be affected if the feed becomes spoiled or contaminated that could lead to potential health risks. The licensee must ensure that measures are taken to ensure that there is no molding, deterioration or caking of the feed. In addition, all food receptacles are kept clean and must be sanitized in accordance with 3.11 (b) of the regulations. Correct by 4/27/16.

* The facility inspection and exit briefing done on 4/13/16 were conducted with the licensee, Dr. Margaret Shaver VMO and Robert Bacon ACI.

Additional Inspectors

Shaver Margaret, Veterinary Medical Officer

Type: ROUTINE INSPECTION

Date: 06-JAN-2016

2.40(b)(2)

REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

* Two red colored adult female Vizsla's (microchip numbers 146324528 A and 146223762 A) and one red colored adult male Vizsla (microchip number 010-789-768) are thin in appearance. When viewed from the back and side, the ribs and backbone were visible from a lack of fat cover on all three dogs. At time of inspection, the attending veterinarian had not been consulted. When the body condition shows a loss in weight to the point that the backbone or ribs are visible, this is a sign of potential health problems. Poor body conditions could be an indication the dogs are not receiving adequate nutrition or it could be internal problems. This can affect the ability of the dogs to gain or maintain an adequate body weight. These dogs must be examined by a licensed vet and appropriate diagnosis and treatment. Documentation must be maintained on all medical problems, diagnosis and treatments. All medical records must be made available to the inspector upon request.

3.1(c)(1)(1)

HOUSING FACILITIES, GENERAL.

* Excessive rust with sharp, jagged edges were observed along the bottom of one sheet of tin that was attached to the north exterior wall of one enclosure. Multiple holes were observed in the sheet of tin ranging from an estimated two to six inches in length. Two dogs are in contact with the affected area which is located in outdoor housing. Rust can erode and deteriorate all metal surfaces to the point that the metal surfaces can no longer be readily cleaned and sanitized. Excessive rust affects the structural integrity of all metal surfaces. The licensee must ensure that all surfaces are free of excessive rust and be of good structural strength. Correct by 1/20/16.

3.1(c)(1)(2)

Prepared By: ROBERT BACON, A C I USDA, APHIS, Animal Care

Inspection Report

HOUSING FACILITIES, GENERAL.

* Broken, protruding vinyl coated wires with sharp points was observed in one enclosure. One dog is in contact with the affected wiring which is located in indoor housing. The affected fencing is attached to the side of the enclosure and is turned inwards toward the dog. Broken, protruding wires with sharp points could cause potential injury to the dogs. The licensee must ensure that all enclosure wires are free of jagged edges or sharp points that might injure the animals. Correct by 1/20/16.

* The facility inspection and verbal exit briefing done on 1/6/16 were conducted with the licensee, Karl Thornton ACI and Robert Bacon ACI.

* The exit briefing done on 1/7/16 was conducted with the licensee and Robert Bacon ACI.
